

Aluminium Formwork System

Flat tie and wedge pin are used as a tying system in aluminum panel formwork. Flat ties are used to hold wall columns and beam panels in place by securing them with the wedge pin. Wedge passes through the predetermined holes on external sides of the panels and the hole on the flat tie. The thickness of these structural elements will be precisely controlled by the pre-fabricated flat ties.

Wedge Pin

- Pin and wedge commonly used in aluminium formwork assist by securing wall ties and aluminium formwork in place for concreting purposes.
- Size : 3mm x 70mm

Round Pin

- For aluminium formwork system
- Size : 16mm x 50mm

Long Pin

- For aluminium formwork system
- Size : 16mm x 195mm
