

Plastic Chamfer

- Plastic Chamfer is made of Polyvinyl Chloride and designed to be used with formwork to create chamfered corners. It is lightweight, easy to handle, and reduces the cost of fabricating special chamfer forms. It is reusable, saves cost and environment-friendly.
- Plastic chamfer are widely used to form chamfered edge and angle groove lines and its ideal for pre-cast and tilt-up construction of supporting wood forms.

Model	Size (MM)	Length (Meter)	Std Pkg (PCS)
