

Steel Bar Chair

- Steel Bar Chair is used to set reinforcing bar and mesh to the correct position, preventing it from being exposed to the environment and corrosion. Bar Chair is made of machine-bent hard drawn steel wires of 4.5 to 6.0 mm diameter, self-colored with powder-coated tips at the legs to prevent corrosion. It has a wide base and a height ranging from 50 to 240 mm at 10 mm increments.
- Steel Bar Chair is used to set reinforcing bar and mesh to the correct position, preventing it from being exposed to the environment and corrosion.
- Steel Bar Chair sizes available from 50mm to 240mm.
