

Rapid Clamp Tensioner

Rapid Clamp Tensioner is a formwork tools to tension rapid clamp and wedge clamp together.

- Assembling & dismantling formwork quicker than ever, simply tap the bottom of the formwork rapid clamp wedges with a hammer, the formwork rapid clamp is immediately released and is ready for use over and over again.
- The protruding steel rods may be cut off if casting is to be plastered. If the casting is to be visible, the rods should be extracted and in this case they must be inserted into a rigid plastic sheath before casting begins. It is possible to extract the rods from the casting even without a plastic sheath. In this case they should be extracted within 24 hours by means of the Rapid Tensioner. The rods must of course be absolutely straight. The holes in the casting may be filled with mortar.

Installation
