

SureGuard PVC Waterstop

Description

SureGuard PVC Waterstops are extruded from high-grade PVC compounds, designed for use in expansion, construction & contraction joints, the concept is to provide a water barrier across all joints where joints will be subjected to moisture seepage or hydrostatic pressure.

Advantages

- Will accommodate movement during construction and service life
- Ease of use simple non-site jointing
- Brass reinforced eyelets edge flanges to ensure perfect fixing
- Approval for use in contact with potable water

Users

SureGuard PVC Waterstops c/w brass reinforced eyelets to provide wiring to reinforcement without penetrating the waterstop within the water-sealing region.

SureGuard PVC Waterstop allow lasting watertight seals in any above or below grades construction for bridges, spillways, reservoirs, tunnels, dams, aqueducts, water tower & tanks, retaining walls, sewage treatment plants, filtration & generation plants, basements & swimming pools, they are being capable of withstanding from either the internal or external face.

Standard Compliance

- BS 2782
